

Introduction

1. The purpose of this study is to investigate the effects of the proposed intervention on the learning outcomes of students in the field of [subject].

2. The study is designed to evaluate the effectiveness of the intervention in improving students' understanding and application of the concepts covered in the course.

3. The research is based on a quantitative approach, using a pre-test/post-test design to measure the impact of the intervention on students' performance.

Research Objectives

The primary objective of this study is to determine the extent to which the proposed intervention leads to significant improvements in students' learning outcomes. The specific objectives are:

- To assess the baseline knowledge and skills of students before the intervention.
- To measure the impact of the intervention on students' understanding and application of the concepts covered in the course.
- To compare the learning outcomes of students who received the intervention with those of a control group.
