the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million.

There are a number of reasons for this increase. One of the main reasons is the rapid population growth in the developing world. The number of people in the world is expected to reach 9 billion by 2050, with a significant proportion of these people living in the developing world. This rapid population growth has led to a corresponding increase in the demand for food, which has not been met by the current level of food production.

Another reason for the increase in undernourishment is the unequal distribution of food. While there is enough food to feed the world, it is not distributed evenly. In some countries, there is a surplus of food, while in others, there is a shortage. This is due to a number of factors, including the concentration of food production in a few countries and the unequal distribution of income.

There are a number of ways in which we can address the problem of undernourishment. One of the most important is to increase food production. This can be done by investing in agricultural research and development, and by providing farmers with the resources and support they need to increase their yields. Another important way to address the problem is to improve the distribution of food. This can be done by supporting local food systems and by ensuring that food is available to all people, regardless of their income.

Finally, it is important to address the underlying causes of undernourishment. This includes addressing the issue of income inequality, and ensuring that all people have access to the resources they need to live a decent life. Only by addressing these underlying causes can we hope to achieve a world in which everyone is well-nourished.

The problem of undernourishment is a complex one, and it will require a coordinated effort from all countries and all sectors of society to solve. However, if we work together, we can make progress towards a world in which everyone is well-nourished and healthy.
